

# **IAS officer's role in preventing air pollution in Delhi NCR during Diwali**

As an IAS officer, one of the key responsibilities towards preventing air pollution during Diwali in Delhi NCR would be to ensure strict implementation of laws and regulations related to the use of firecrackers.

Some of the specific measures that could be taken by an IAS officer include:

1. Enforcing a ban on the sale and use of firecrackers, especially those that have been identified as being particularly harmful to air quality.
2. Collaborating with the police department to ensure that those who violate the ban are penalized and held accountable.
3. Working with other government agencies to increase public awareness about the negative effects of firecrackers on air quality, and promoting alternative ways to celebrate the festival of Diwali.
4. Coordinating with pollution control boards to monitor air quality levels before, during and after the Diwali festival, and taking prompt action in case of any violations.
5. Encouraging individuals and organizations to adopt eco-friendly practices such as using LED lights and avoiding single-use plastic during the festival.

In addition to these measures, an IAS officer could also work with other stakeholders, such as civil society organizations and industry associations, to develop a comprehensive strategy for reducing air pollution during Diwali and beyond. This could include initiatives such as promoting green technologies, encouraging public transportation, and incentivizing the use of clean energy sources.
